Vol. 305

3/12/91

Ogeechee River,
Chatham Co., Ga.
Observed:
1. australe.
2. myrsinites.
3. Elliottii
4. tenellum.
5. jamesianum.
Also Elliottii with
glandular twigs.

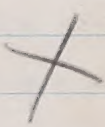
All in one area
with the following:

here Angelica is a shrub to 5 ft spreading by stolons to make a bushy growth.

Ellisii is variable in stem pubescence.

Also here the "australis" with glands on lower surface of leaves 2 plants. One tall (5 ft) with small pink fls.

This seems to have a lot of mycelia in it & on the rouge plant the leaves were persist.



Liberty Co Ga.
near Midway
— low swampy area.
V. Elliottii to 8 ft.
V. amoenum 4½ ft.
on dry slope above.
V. tenellum 1½ ft.

here also was the
large glabrous leaved
glandular form 3 ft.

No australe seen.
here Elliottii was
both glabrous + pubescent
leafed.

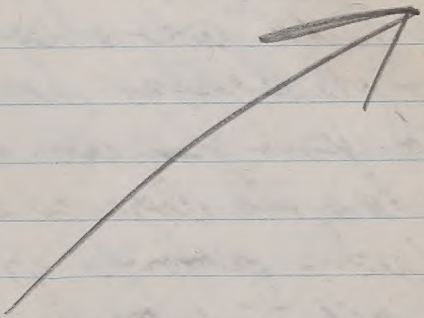
* * *

at village of
midway.
① Anopheles
② Christii.
note long shafts
of Christii Lane
Inc. glands on
leaves.

× × ×

Low ground near
midway.
① nigrimaculis.
② arbanensis ③ 7 ft.
+ a series of subvergen
gland & non gl. intermed.
also pub & non pubesc.

(was this fire at the
Abraham ?)



× Mch 20.

Visited the locality
near Metuchen Junction
north of Brunswick
Ga.

The white bluff
— 10 acres — said
to have been dug up
along the Ogeechee
River about 1929
2 ft. from surface.
Both many of the
small rooted forms
were eliminated, but
many remain.
Red bluff fossil
poor. Too dense

to be terminated
by Australia, altho
"old" hard top
answers to present.
All low with almost
level and sub
glacial (Judge
said dark) fault.
The two beds
range to 10 ft.
in [illegible] and seem
to be very close to
U. carbaniferous.

The [illegible] rocks
3 [illegible] underground

The ammonoid here
was very similar to
that occurring
along the Aberdeen
Point 3 to 4 ft, the
fairly large, pinched
umbilicus
depressed, with
elliptic bars on
ventral + lateral veins,
and glandular. A
marked character was
the very strong anchoring
for the siphuncle.
Warren says this is
characteristic of the
Pachyceras [illegible]

But the surprising
thing is the small
flowered, white to
cleistogamous; the
corolla is indistinct
or absent; the
stamens; the leaf
blades are
generally shorter,
broader, & the
smaller leaves
typical austriaca.
Plants can not
be diploid and the

Source of the report
of dissolved ~~[illegible]~~
Chlorine!

So this may be the
source of the
Arsenic by-product
Cutlerite

!!!

Let's investigate
look for it on the
Gilbert + the Savannah
Rivers.

It is to be noted
that the twigs in
Georgia ~~are~~ tend to
be less green — but
the plants are invariably
twiggy.

X X X

Note on wild
Pleurotus from
Friedrichsfeld,
Baden area with
short marginals.

On the chief area
V. Mycenae was

Arrow - Lee

St. John
Along [illegible] River
Sept. 1st
Just [illegible] Creek
along arm of Indian
River south side
and west of road
[illegible] (State Road 47).

Here a great collection
of V. tamoenum,
forming nearly
solid undergrowth
under holly, magnolia
etc., etc. — hundreds
& hundreds of plants,
some in large

Stooling clamps up to 30 ft across and 10-12 ft. high.

Wooden beams were received. They were neatly trimmed with the adz and form beginning to show and quite clean as they progressed. The performance was entirely satisfactory. [illegible] were very busy [illegible] with the adz always obvious.

The glumes near the base narrow ovate-lanceolate and white and about as long as the sprouts, the prevailing color near the bases being purplish.

It has cut and burned readily along the roads & the sprouting clumps were at a distance of 2 ft and have only 1/2 to 2 ft high. or higher

depending on the length of time since cultivation ceased.

The may be seen abundantly in light woods of the species in old fields.

Has also been Hypericum, in the normal & narrow leaved sub division of the species.

* *

D. J. Fairchild.
Ft Pierce Fla.

Here was a victory
of real V freedom

In spring it was
early - with several
of the 20 or more plants
opening in front
of incredible gaze.
In the bush they were
able to deep pink.
Some of the newest
leaves were scabrid
due to the sun

These plants do not stool!

tones on the upper side of the leaf; the lower surface directly pubescent.

Note: on the upper apical stem the leaves were the narrow type of the "type" - this is especially true of the low plants after being cut a few!

Differences were present but not "abnormal" ones.

* * *

In St Augustine.

Here a negro who had lived a great deal both of the tall pine and low lands. a few of the tall ones the - yellow pine might call handsome - do not use the word black - for was not at the Eldorado - (Science of Glory) a turpentine refinery near St Augustine

But - he continued -
they ain't within two
half-hogs flies up to
nuthin all been fur
Swamp neck
Madley - Jefferson -
County - Jefferson -

Now Madley -
Jefferson Co. is up
the Ogeechee River
- and we remember
the Blue Hybiscus
from Jefferson all
of which came

from the Agua
Verde — as well
as the treacherous
Lava — making wild
for the Canoochee
— and the poor Indians
up towards the Walker
County — Is this
to succeed the
Hard Rebellion?

March 22

at Jacksonville Fla

From St Augustine
back to Jacksonville
over A.C.L. to Jax.
to St Aug. — South,
and across a sand
road west across
to Palatka — then
to Jacksonville —

In the middle ages
there seems to have been
two opposite
mysticism and
fascination.

But [illegible]
[illegible] only
[illegible]
[illegible] to [illegible].

[illegible]
[illegible]
[illegible]
[illegible] seem
to go to the left
in the light, but
in [illegible] was
[illegible]
[illegible]
[illegible]
[illegible]
[illegible]
[illegible]

— color of leaf, shape
or glandulae of
hypanthium — being
up to 5 or 6 in some
more cases. And
I have yet to see
a seedling.

Neither have
that the "Evergreen"
Forestry Co. grew
the [illegible] branches
— yet they [illegible]
the [illegible] work.

March 23

at Tallahassee, Fla.

~~Fever~~

Of the tall kinds, Jessamine has done best all across Florida, tho, of course, on the swamp areas. And as usual — when it comes — once came into contact with my skin it showed.

Then of my mouth

is always detaxpaid
there would indeed
that Jerusalem is
detaxpaid (for ought I
know).

It was not
very long along
the Jerusalem Road
before we turned
for [illegible] but
[illegible]
[illegible]ty of Christ[illegible] x
and [illegible]ity but
[illegible] [illegible] of
[illegible]ing.

The organist of the Tabernacle was a fellow named Angelo Hammes! A Mormon — also Mormon was Gladden. Thus, as usual was Gladden. Upon the roll of the choir it showed that the two owned nearly. But also here were all sorts of

Crosses & combination
~~with~~ precaution
& impossibility.

The synopsis of the
Confusion River valley
leads one to
What seems to
be crosses between
precaution and
Stupidity. What
does this mean?

Are the disjoint
and detached
phrases of Christie?

Or do we have

He cried about Jesus
Thinking of Heaven

Fla. Rabbit
Pen. Hill Hayes
Okeechobee Co
March 25.

Further note,
At large field
near Baker.
— 35 acres a day
estimated 30,000 plants
All along up the
Kissimmee River to Fla
and [illegible] — some
15 — 18 miles up
the river. Still
[illegible] some
[illegible] up

more than 2-3 parts
so that there were
probably not less than
10,000 plants involved
in the area.

They were remarkably
variable - but within
limits. Some were
tall - up to 5 ft,
others rarely got more
than 3 ft. (but there is a).
Some had deep
purple marbled
flowers - other pale
to deep pink
variety.

There was some

variations in the
color of the hyacinths
with the tiny bulbs from
one flower. Flowers
& leaves very poor
as last year, many
with a slight bloom
& not true.

Of the 3 leaves
we planted this year
were viable. Of the
many they showed
the characteristic
of the 3rd & 4th generation —
dominated by flowers

and basally smooth,
with slight radial
pubescent reaction
with the appearance
of pubescence, but
often reduced and
occasionally lacking.
Only rarely are
the latitude pubes-
cent. Almost invariably
they are glabrous,
but rarely they are
more or less lacking
at base to be
examined to advantage.

My plant had
4 ft long pale
shoots & leaves.
But the nights
were cold
so the flowers
(then shed rather
dry.

Some of the plants
were short - often
spreading with
contorted branches.
The majority produced
and seeds freely
after some had

main trunks.
Hagood marked that some Rattlers had main trunks and main ground stem - but that the majority were searched and did not show any trunk at all - but only with branches.
This author's text is typical of Brandegee!

On shot put
Anderson + Austin
together and the
result would be
Rathbone —
Curwen — but
if pressed
I should have
Cox — and
I seem to have,
for reasons
as the Rathbone
— I suppose I
Austin is listed
— and he would
Anderson child

A point that way, but we do not know as yet.
It did not seem to cross with the tetraploid Myrsinella of St. Augustine as we had!!

—o—

In Georgia the Myrsinella was called glaucum in called Pinkneyi.

Have decided (?!)
to call him
Pat - Stinny
Byfleet.

March 26 -

The search for Rabbit eye continued from Artalasia to Oroville, to Juvenile, Brantley - on to Orland - and across the Yellow River valley and eastward but found no Rabbiteye. So it must all south of Up where it starts at least to Artalasia.

Mar 27.

5 mi E of
Valdosta Ga.

Held in one small
area - 1 acre
& less was found
1) M. pseudo.
2) M. vaccinia
3) + intermediates.
4) M. fuscatum.
5) Auriculata (1 bud)
6) Fuc x aust.

6 fuscatus
